Dear HR,

I hope you are doing well. I am writing this email to apply for the post of Game Analyst. I am a final year student of BS computer sciences at the National University of Computer and Emerging Sciences, with my interest in Database and Blockchain. My academic projects were based on different technologies like Android App Development, Database Management, and Artificial Intelligence. I have done my previous internship from Ora-Tech Systems in 2018 and currently, I am working as a Teacher Assistant for the Advanced Database course at the National University of Computer and Emerging Sciences.

I am a hardworking, friendly, and reliable person. I appreciate being challenged and engaging with projects that expect me to work outside my solace and knowledge set, as continuing to learn new languages and development techniques are essential to me and the success of your organization. I want to perform as a key player in a motivating, dynamic, and highly professional organization where my capabilities and skills in the field of Computer Science will enable me to become an asset for the organization by achieving the organizational goals. A place where I can constantly improve my professional skills.

For the last 3 years, I have been actively participating in volunteer work in different societies of my university for the Decoration Team. Even though I believe in "The harder you work, the luckier you get", I still often prefer smart-work over hard-work. I am always eager to learn and explore new things. My interest in new things led me to learn 4 languages and different fields of Arts (painting, Sketching, and digital art). I also love reading books that help me to sharpen my creativity and imagination skills. I want to become a person who is not only responsible for my own future but also helpful for others and I am confident I will be an asset for your organization.

Currently, I am looking for a full-time job. Therefore, I would like to apply for the post of Game Analyst at Frag Games that can help me gain great experience in professional life. I hope to join you in your sincere efforts. I look forward to hearing from you soon.

Please find my resume and transcript enclosed with this mail. Thank you for your consideration.

Regards,

Zarmeen Mustafa

Hi Zarmeen,

Thank you for considering this position.

Your grades seem good in core courses. We have a vacancy for engineers as well. Would you like to be considered for a position of Game Engineer?

If you have questions let me know. When you respond to this email, HR will send you an official email for the interview.

As you are a fresh graduate, there is no requirement other than having a degree in a relevant field.

For the job role, in short, you ll be making games.

There will be training before you get deployed on a proper project. Your responsibilities will be on the lines of understanding the requirements, for which you'll have a project manager working with you, and transforming that into code. You'll have a team lead working with you as well to help with the tasks.

Initially your primary responsibility would be to learn the engine you get deployed on, it could be Unreal or Unity. And see how the concepts of software engineering align with the rules of game programming.

No, they haven't contacted me yet. But I am afraid I won't be able to join your company as I have accepted another offer from another company. Thank you for your time and consideration.

Regards,
Zameen Mustafa
